# Kodak Remanufactured Graphic Solutions

## Kodak quality and high return on investment

Many of our customers, as their businesses grow or change, trade their systems in for technology that is newer or more advanced. A good example of this is customers who transition from image setting to plate setting. Kodak remanufactures pre-owned equipment using the same rigorous quality checks as our new products. The equipment is then offered for sale as a **Kodak** remanufactured graphic solution.

## Another facet of our commitment to total solutions

As a provider of complete solutions for the graphic arts industry, Kodak can help businesses of any size or scope find a prepress solution. For many customers, remanufactured equipment is a viable, cost-effective option. Affordable **Kodak** remanufactured equipment helps you stay ahead of the competition and enables you to join the thousands of customers who benefit from **Kodak** technology.

## A comprehensive series of quality assurance procedures

Remanufactured equipment is meticulously renewed to provide years of reliable performance. Regardless of the duration of previous ownership, the renewal includes the following:

- Complete testing of optic and drive assemblies; replacement of precision components
- Replacement of electronic and driver boards
- Replacement of mechanical parts showing wear, such as bearings
- Reconditioning of input and output cassettes
- Touch-up of paint on housing
- Installation of the latest software and incorporation of all engineering change orders that improve equipment reliability

The remanufacturing process takes place on the same **Kodak** production line as new products, and replacement parts come from the same trusted source. Remanufactured **Kodak** equipment must undergo the same quality assurance procedures as new equipment and meet the specifications of the original product.

## A high-performance investment

**Kodak** Remanufactured Graphic Solutions provide the highest cost-to-performance ratio. You will be able to improve your prepress quality and productivity within a limited budget, without compromising reliability or performance.

## Kodak: best qualified to remanufacture Kodak products

Kodak has the full service history of every remanufactured product, which allows us to select the best parts and methods for remanufacturing. We have access to all original part replacements, from lamps to drums, and can custom retrofit the equipment to meet special hardware needs. We only remanufacture **Kodak** products, and do so to a factory-authorized standard. Pre-owned **Kodak** products sold through other, non-Kodak channels are not subjected to rigorous **Kodak** quality control processes, nor do they carry any warranty from Kodak.

## Quality remanufactured solutions

Our remanufactured equipment is ready for operation as soon as it is delivered. Kodak offers full support for the entire line:

- Full warranty, similar to that of new equipment
- Commitment to supply first-rate service and parts
- A choice of service contracts, with professional support from skilled engineers, to maintain smooth and reliable operation
- Opportunity to upgrade by trading in **Kodak** remanufactured equipment for a new-generation system.

Receiving a machine for remanufacturing

Replacing and aligning drum grippers

Testing and calibrating output cassettes

Application of new paint

**Equipment available for any need**  
Choose from a wide variety of pre-owned **Kodak** equipment: **Dolev** imagesetters, **Trendsetter** or **Lotem** platesetters, color proofers, **Brisque** or **Prinerly** workflow systems, color and copydot scanners, and many other **Kodak** products.
